18

This thesis is available to the public.

18

19 “I hereby grant the University of the Philippines a non-exclusive, worldwide, royalty- 19
20 free license to reproduce, publish, and publicly distribute copies of this thesis in what- 20
21 ever form subject to the provisions of applicable laws, the provisions of the UP IPR 21
22 policy, and any contractual obligations, as well as more specific permission marking 22
23 on the Title Page.” 23

24 24
25 “Specifically I grant the following rights to the University: 25

26 a) To upload a copy of the work in the theses database of 26
27 the college/school/institute/department and in any other 27
28 databases available on the public internet; 28

29 b) To publish the work in the college/school/institute/department 29
30 journal, both in print and electronic or digital format and 30
31 online; and 31

32 c) To give open access to above-mentioned work, thus allowing 32
33 ‘fair use’ of the work in accordance with the provisions of the 33
34 Intellectual Property Code of the Philippines (Republic Act 34
35 No. 8293), especially for teaching, scholarly, and research 35
36 purposes.” 36

48	Acknowledgments	48
49	Thanks to my adviser, Adviser M. Name, PhD. Thanks to the panel members	49
50	for their valuable feedback during the oral defense. Thanks to ABC Foundation for	50
51	funding my studies. Thanks to the Filipino people for subsidizing my education.	51
52	Thanks to my family.	52

53	Abstract of Thesis	53
54	Make a concise summary that will fit in half a page. Must answer the following:	54
55	1. What is the problem that I am solving and why does it matter?	55
56	2. What are the state-of-the-art (SOTA) solutions to this problem?	56
57	3. What is the gap in the current SOTA?	57
58	4. What is your idea to address this gap?	58
59	5. Why do you think your idea will work?	59
60	6. How will you execute your idea?	60
61	7. What is the empirical evidence that your idea works?	61
62	8. What can you conclude from the study that you have accomplished?	62

1. Introduction

99

- At least 5 pages.

99

100

- Summary of the whole thesis. Use previous studies, diagrams, and illustrations to emphasize the motivation behind this thesis.

100

101

101

102

- Must answer the following:

102

103

1. What is the problem that I am solving and why does it matter?

103

104

2. What are the state-of-the-art (SOTA) solutions to this problem?

104

105

3. What is the gap in the current SOTA?

105

106

4. What is your idea to address this gap?

106

107

5. Why do you think your idea will work?

107

108

6. How will you execute your idea?

108

109

7. What is the empirical evidence that your idea works?

109

110

8. What can you conclude from the study that you have accomplished?

110

111

9. What are the possible future works that will extend your study?

111

112

- List the roadmap to the rest of the manuscript.

112

113

Start Strong: For every chapter (except possibly the Problem Statement), make an introduction (2 or 3 paragraphs) on what the chapter is all about.

113

114

114

115

Stay Strong: Explain ideas in the simplest and most direct way that many people in your field can understand. If a certain topic is a bit specialized or hard to remember, make a concise introduction. Point the reader to a reference for further understanding. Each chapter should be complete or stand-alone and concise.

115

116

116

117

117

118

118

119

Finish Strong: At the end, make a summary (2 or 3 paragraphs) to re-emphasize the points discussed in the chapter.

119

120

120

121	1.1 Scope and Limitations	121
122	What is the scope of your work? What are its limitations?	122
123	1.2 Structure	123
124	This thesis is organized as follows. In Chapter 2, the discussion on the body	124
125	of work contextualizes our approach. Chapter 3 discusses the problem statement of	125
126	this thesis. In Chapter 4, the methodology is discussed in more detail. Chapter 5	126
127	contains the evaluation results, while Chapter 6 contains the analysis and discussion.	127
128	The thesis is concluded in Chapter 7.	128

129	2. Related Work	129
130	• Expound #2 (<i>What are the state-of-the-art (SOTA) solutions to this problem?</i>)	130
131	and #3 (<i>What is the gap in the current SOTA?</i>) by rigorously enumerating	131
132	related works and analyzing these in the context of the problem that you are	132
133	solving.	133
134	• Build a taxonomy or survey to narrow down the field of study of the problem	134
135	and to limit the scope of your thesis. If there is a recent survey paper in your	135
136	problem, use it. If none, use Google Scholar to build a tree diagram of related	136
137	work.	137
138	• Build a table or graph with metrics to show what are available features and	138
139	what are lacking in the current SOTA.	139
140	• Using the table/graph, identify the gap to show what do you intend to solve.	140
141	• Introduce the idea on how to solve this gap.	141
142	2.1 Chapter Summary	142
143	Start Strong: For every chapter (except possibly the Problem Statement),	143
144	make an introduction (2 or 3 paragraphs) on what the chapter is all about.	144
145	Stay Strong: Explain ideas in the simplest and most direct way that many	145
146	people in your field can understand. If a certain topic is a bit specialized or hard to	146
147	remember, make a concise introduction. Point the reader to a reference for further	147
148	understanding. Each chapter should be complete or stand-alone and concise.	148
149	Finish Strong: At the end, make a summary (2 or 3 paragraphs) to re-	149
150	emphasize the points discussed in the chapter.	150

151	3. Problem Statement	151
152	• Following up from #3 (<i>What is the gap in the current SOTA?</i>), formalize the	152
153	main problem and subproblems using a list.	153
154	• Use math models and diagrams to clearly show the problem and subproblems	154
155	being addressed (<i>e.g.</i> prior work uses $P(\mathbf{y} \mathbf{y}_{<t}, \mathbf{x})$ as the model, while we use	155
156	$P(\mathbf{y} \mathbf{y}_{\neq t}, \mathbf{x})$).	156
157	Start Strong: For every chapter (except possibly the Problem Statement),	157
158	make an introduction (2 or 3 paragraphs) on what the chapter is all about.	158
159	Stay Strong: Explain ideas in the simplest and most direct way that many	159
160	people in your field can understand. If a certain topic is a bit specialized or hard to	160
161	remember, make a concise introduction. Point the reader to a reference for further	161
162	understanding. Each chapter should be complete or stand-alone and concise.	162
163	Finish Strong: At the end, make a summary (2 or 3 paragraphs) to re-	163
164	emphasize the points discussed in the chapter.	164
165	3.1 Objectives	165
166	The specific objectives of this thesis are:	166
167	1. Propose a new method X to solve problem Y.	167
168	2. Compare methods A, B, and C against our method X.	168

169	4. Methodology	169
170	• Expound #4 (<i>What is your idea to address this gap?</i>), #5 (<i>Why do you think</i>	170
171	<i>your idea will work?</i>), and #10 (<i>Introduce the idea on how to solve this gap</i>).	171
172	• Propose a solution. Use math models, diagrams, and algorithms to formalize	172
173	your method.	173
174	• Cite related literature of the building blocks used in the proposed method.	174
175	• Justify every decision in your proposed method (<i>e.g.</i> we used batch normaliza-	175
176	tion to stabilize the training)	176
177	4.1 Style and Formatting	177
178	4.1.1 Mathematics	178
179	Please number all of your sections and displayed equations as in these exam-	179
180	ples:	180
	$E = m \cdot c^2 \tag{4.1}$	
181	and	181
	$v = a \cdot t. \tag{4.2}$	
182	It is important for readers to be able to refer to any particular equation. Just because	182
183	you did not refer to it in the text does not mean some future reader might not need to	183
184	refer to it. It is cumbersome to have to use circumlocutions like “the equation second	184
185	from the top of page 3 column 1”. (Note that the ruler will not be present in the final	185
186	copy, so is not an alternative to equation numbers). All authors will benefit from	186
187	reading Mermin’s description of how to write mathematics: http://www.pamitc.	187
188	org/documents/mermin.pdf .	188

Figure 4.1: Example of caption. It is set in Roman so that mathematics (always set in Roman: $B \sin A = A \sin B$) may be included without an ugly clash.

4.1.2 Footnotes

Please use footnotes¹ sparingly. Indeed, try to avoid footnotes altogether and include necessary peripheral observations in the text (within parentheses, if you prefer, as in this sentence). If you wish to use a footnote, place it at the bottom of the column on the page on which it is referenced. Use Times 8-point type, single-spaced.

4.1.3 Cross-references

For the benefit of author(s) and readers, please use the

`\cref{...}`

command for cross-referencing to figures, tables, equations, or sections. This will automatically insert the appropriate label alongside the cross-reference as in this example:

To see how our method outperforms previous work, please see Fig. 4.1 and Tab. 4.1. It is also possible to refer to multiple targets as once, *e.g.* to Figs. 4.1 and 4.2a. You may also return to Sec. 4.1 or look at Eq. (4.2).

If you do not wish to abbreviate the label, for example at the beginning of the sentence, you can use the

`\Cref{...}`

command. Here is an example:

Figure 4.1 is also quite important.

¹This is what a footnote looks like. It often distracts the reader from the main flow of the argument.

Method	Frobnability
Theirs	Frumpy
Yours	Frobbly
Ours	Makes one's heart Frob

Table 4.1: Results. Ours is better.

208 4.1.4 References 208

209 List and number all bibliographical references in 9-point Times, single-spaced, 209
210 at the end of your paper. When referenced in the text, enclose the citation number 210
211 in square brackets, for example [6]. Where appropriate, include page numbers and 211
212 the name(s) of editors of referenced books. When you cite multiple papers at once, 212
213 please make sure that you cite them in numerical order like this [1], [2], [4]–[6]. If you 213
214 use the template as advised, this will be taken care of automatically. 214

215 4.1.5 Illustrations, graphs, and photographs 215

216 All graphics should be centered. In L^AT_EX, avoid using the `center` environment 216
217 for this purpose, as this adds potentially unwanted whitespace. Instead use 217

218 `\centering` 218

219 at the beginning of your figure. Please ensure that any point you wish to make 219
220 is resolvable in a printed copy of the paper. Resize fonts in figures to match the font 220
221 in the body text, and choose line widths that render effectively in print. Readers 221
222 (and reviewers), even of an electronic copy, may choose to print your paper in order 222
223 to read it. You cannot insist that they do otherwise, and therefore must not assume 223
224 that they can zoom in to see tiny details on a graphic. 224

225 When placing figures in L^AT_EX, it's almost always best to use `\includegraphics`, 225
226 and to specify the figure width as a multiple of the line width as in the example below 226

227 `\usepackage{graphicx} ...` 227
228 `\includegraphics[width=0.8\linewidth]` 228
229 `{myfile.pdf}` 229

230 4.1.6 Color 230

231 If you use color in your plots, please keep in mind that a significant subset of 231
232 reviewers and readers may have a color vision deficiency; red-green blindness is the 232

(a) An example of a subfigure.

(b) Another subfigure.

Figure 4.2: Example of a short caption, which should be centered.

most frequent kind. Hence avoid relying only on color as the discriminative feature in plots (such as red *vs.* green lines), but add a second discriminative feature to ease disambiguation.

4.1.7 Miscellaneous

Compare the following:

`$conf_a$` *conf_a*

`conf_a` *conf_a*

See The T_EXbook, p165.

The space after *e.g.*, meaning “for example”, should not be a sentence-ending space. So *e.g.* is correct, *e.g.* is not. The provided `\eg` macro takes care of this.

When citing a multi-author paper, you may save space by using “et alia”, shortened to “*et al.*” (not “*et. al.*” as “*et*” is a complete word). If you use the `\etal` macro provided, then you need not worry about double periods when used at the end of a sentence as in Alpher *et al.* However, use it only when there are three or more authors. Thus, the following is correct: “Frobnication has been trendy lately. It was introduced by Alpher [1], and subsequently developed by Alpher and Fotheringham-Smythe [2], and Alpher *et al.* [3].”

This is incorrect: “... subsequently developed by Alpher *et al.* [2] ...” because reference [2] has just two authors.

251	4.2 Chapter Summary	251
252	Start Strong: For every chapter (except possibly the Problem Statement),	252
253	make an introduction (2 or 3 paragraphs) on what the chapter is all about.	253
254	Stay Strong: Explain ideas in the simplest and most direct way that many	254
255	people in your field can understand. If a certain topic is a bit specialized or hard to	255
256	remember, make a concise introduction. Point the reader to a reference for further	256
257	understanding. Each chapter should be complete or stand-alone and concise.	257
258	Finish Strong: At the end, make a summary (2 or 3 paragraphs) to re-	258
259	emphasize the points discussed in the chapter.	259

260	5. Results	260
261	• Expound #6 (<i>How will you execute your idea?</i>) and #7 (<i>What is the empirical</i>	261
262	<i>evidence that your idea works?</i>).	262
263	• Make a complete description of your experimental setup (<i>e.g.</i> dataset, train and	263
264	test/validation configurations, hardware configurations, software framework).	264
265	• Describe the metrics (performance measures) that are used to benchmark the	265
266	task. These are the same metrics in the review of lit. Sometimes, you may need	266
267	to introduce new metrics. However, you have to have a strong justification on	267
268	why there is a need for a new metric and it is a good measure of performance	268
269	in a task.	269
270	• Make sure the metrics are comprehensive (<i>e.g.</i> include model parameter count,	270
271	FLOPs, inference time, memory use, energy consumption, <i>etc.</i>).	271
272	• Use graphs and tables to summarize the quantitative results from your proposed	272
273	method vs SOTA.	273
274	• Illustrate sample outputs to qualitative describe the results of your experiments.	274
275	5.1 Chapter Summary	275
276	Start Strong: For every chapter (except possibly the Problem Statement),	276
277	make an introduction (2 or 3 paragraphs) on what the chapter is all about.	277
278	Stay Strong: Explain ideas in the simplest and most direct way that many	278
279	people in your field can understand. If a certain topic is a bit specialized or hard to	279
280	remember, make a concise introduction. Point the reader to a reference for further	280
281	understanding. Each chapter should be complete or stand-alone and concise.	281
282	Finish Strong: At the end, make a summary (2 or 3 paragraphs) to re-	282
283	emphasize the points discussed in the chapter.	283

284

6. Analysis and Discussion

284

285

- As a follow up of #7 (*What is the empirical evidence that your idea works?*), given the experimental results, make an in-depth analysis and discussion to argue and justify that your proposed method works.

285

286

286

287

287

288

- Use further evidences (*e.g.* attention maps) to emphasize the strong points of your method.

288

289

289

290

- Make an ablation study (*e.g.* what if we vary the depth of the network, what if we introduce data corruption, etc) to further show strong/weak points of your proposed method.

290

291

291

292

292

293

- No method is perfect. What are the failure cases of your method (*e.g.* method does not work on rotated text). Explain why your method fails in these cases.

293

294

294

295

6.1 Chapter Summary

295

296

Start Strong: For every chapter (except possibly the Problem Statement), make an introduction (2 or 3 paragraphs) on what the chapter is all about.

296

297

297

298

Stay Strong: Explain ideas in the simplest and most direct way that many people in your field can understand. If a certain topic is a bit specialized or hard to remember, make a concise introduction. Point the reader to a reference for further understanding. Each chapter should be complete or stand-alone and concise.

298

299

299

300

300

301

301

302

Finish Strong: At the end, make a summary (2 or 3 paragraphs) to re-emphasize the points discussed in the chapter.

302

303

303

304	7. Conclusion	304
305	• Expound #8 (<i>What can you conclude from the study that you have accom-</i>	305
306	<i>plished?</i>) and #9 (<i>What are the possible future works that will extend your</i>	306
307	<i>study?</i>).	307
308	• Please summarize all important points of your thesis (<i>i.e.</i> from the beginning	308
309	to end).	309
310	• What are the future unsolved issues in your thesis?	310
311	• How other researchers can take off from your outputs?	311
312	7.1 Limitations and Future Work	312
313	What are the limitations of your work? Given these, what are possible future	313
314	research directions?	314
