Acknowledgments

Thanks to my adviser, Adviser M. Name, PhD. Thanks to the panel members for their valuable feedback during the oral defense. Thanks to ABC Foundation for funding my studies. Thanks to the Filipino people for subsidizing my education. Thanks to my family.

50	Abstract of Thesis	50
51	Make a concise summary that will fit in half a page. Must answer the following:	51
52	1. What is the problem that I am solving and why does it matter?	52
53	2. What are the state-of-the-art (SOTA) solutions to this problem?	53
54	3. What is the gap in the current SOTA?	54
55	4. What is your idea to address this gap?	55
56	5. Why do you think your idea will work?	56
57	6. How will you execute your idea?	57
58	7. What is the empirical evidence that your idea works?	58
59	8. What can you conclude from the study that you have accomplished?	59

1. Introduction

- At least 5 pages.

- Summary of the whole thesis. Use previous studies, diagrams, and illustrations to emphasize the motivation behind this thesis.

- Must answer the following:

1. What is the problem that I am solving and why does it matter?

2. What are the state-of-the-art (SOTA) solutions to this problem?

3. What is the gap in the current SOTA?

4. What is your idea to address this gap?

5. Why do you think your idea will work?

6. How will you execute your idea?

7. What is the empirical evidence that your idea works?

8. What can you conclude from the study that you have accomplished?

9. What are the possible future works that will extend your study?

- List the roadmap to the rest of the manuscript.

Start Strong: For every chapter (except possibly the Problem Statement), make an introduction (2 or 3 paragraphs) on what the chapter is all about.

Stay Strong: Explain ideas in the simplest and most direct way that many people in your field can understand. If a certain topic is a bit specialized or hard to remember, make a concise introduction. Point the reader to a reference for further understanding. Each chapter should be complete or stand-alone and concise.

Finish Strong: At the end, make a summary (2 or 3 paragraphs) to re-emphasize the points discussed in the chapter.

121	1.1 Scope and Limitations	121
122	What is the scope of your work? What are its limitations?	122
123	1.2 Structure	123
124	This thesis is organized as follows. In Chapter 2, the discussion on the body of work	124
125	contextualizes our approach. Chapter 3 discusses the problem statement of this thesis. In	125
126	Chapter 4, the methodology is discussed in more detail. Chapter 5 contains the evaluation	126
127	results, while Chapter 6 contains the analysis and discussion. The thesis is concluded in	127
128	Chapter 7.	128

129

2. Related Work

129

130

- Expound #2 (*What are the state-of-the-art (SOTA) solutions to this problem?*) and #3 (*What is the gap in the current SOTA?*) by rigorously enumerating related works and analyzing these in the context of the problem that you are solving.

130

131

131

132

132

133

- Build a taxonomy or survey to narrow down the field of study of the problem and to limit the scope of your thesis. If there is a recent survey paper in your problem, use it. If none, use Google Scholar to build a tree diagram of related work.

133

134

134

135

135

136

- Build a table or graph with metrics to show what are available features and what are lacking in the current SOTA.

136

137

137

138

- Using the table/graph, identify the gap to show what do you intend to solve.

138

139

- Introduce the idea on how to solve this gap.

139

140

2.1 Chapter Summary

140

141

Start Strong: For every chapter (except possibly the Problem Statement), make an introduction (2 or 3 paragraphs) on what the chapter is all about.

141

142

142

143

Stay Strong: Explain ideas in the simplest and most direct way that many people in your field can understand. If a certain topic is a bit specialized or hard to remember, make a concise introduction. Point the reader to a reference for further understanding. Each chapter should be complete or stand-alone and concise.

143

144

144

145

145

146

146

147

Finish Strong: At the end, make a summary (2 or 3 paragraphs) to re-emphasize the points discussed in the chapter.

147

148

148

149

3. Problem Statement

149

150

- Following up from #3 (*What is the gap in the current SOTA?*), formalize the main problem and subproblems using a list.

150

151

151

152

- Use math models and diagrams to clearly show the problem and subproblems being addressed (*e.g.* prior work uses $P(\mathbf{y}|\mathbf{y}_{<t}, \mathbf{x})$ as the model, while we use $P(\mathbf{y}|\mathbf{y}_{\neq t}, \mathbf{x})$).

152

153

153

154

Start Strong: For every chapter (except possibly the Problem Statement), make an introduction (2 or 3 paragraphs) on what the chapter is all about.

154

155

155

156

Stay Strong: Explain ideas in the simplest and most direct way that many people in your field can understand. If a certain topic is a bit specialized or hard to remember, make a concise introduction. Point the reader to a reference for further understanding. Each chapter should be complete or stand-alone and concise.

156

157

157

158

158

159

159

160

Finish Strong: At the end, make a summary (2 or 3 paragraphs) to re-emphasize the points discussed in the chapter.

160

161

161

162

3.1 Objectives

162

163

The specific objectives of this thesis are:

163

164

1. Propose a new method X to solve problem Y.

164

165

2. Compare methods A, B, and C against our method X.

165

166

4. Methodology

166

167

- Expound #4 (*What is your idea to address this gap?*), #5 (*Why do you think your idea will work?*), and #10 (*Introduce the idea on how to solve this gap*).

167

168

168

169

- Propose a solution. Use math models, diagrams, and algorithms to formalize your method.

169

170

170

171

- Cite related literature of the building blocks used in the proposed method.

171

172

- Justify every decision in your proposed method (*e.g.* we used batch normalization to stabilize the training)

172

173

173

174

4.1 Style and Formatting

174

175

4.1.1 Mathematics

175

176

Please number all of your sections and displayed equations as in these examples:

176

$$E = m \cdot c^2 \quad (4.1)$$

177

and

177

$$v = a \cdot t. \quad (4.2)$$

178

It is important for readers to be able to refer to any particular equation. Just because you did not refer to it in the text does not mean some future reader might not need to refer to it. It is cumbersome to have to use circumlocutions like “the equation second from the top of page 3 column 1”. (Note that the ruler will not be present in the final copy, so is not an alternative to equation numbers). All authors will benefit from reading Mermin’s description of how to write mathematics: <http://www.pamitc.org/documents/mermin.pdf>.

178

179

179

180

180

181

181

182

182

183

183

Figure 4.1: Example of caption. It is set in Roman so that mathematics (always set in Roman: $B \sin A = A \sin B$) may be included without an ugly clash.

4.1.2 Footnotes

Please use footnotes¹ sparingly. Indeed, try to avoid footnotes altogether and include necessary peripheral observations in the text (within parentheses, if you prefer, as in this sentence). If you wish to use a footnote, place it at the bottom of the page on which it is referenced. Use Times 10-point type, single-spaced.

4.1.3 Cross-references

For the benefit of author(s) and readers, please use the

`\cref{...}`

command for cross-referencing to figures, tables, equations, or sections. This will automatically insert the appropriate label alongside the cross-reference as in this example:

To see how our method outperforms previous work, please see Fig. 4.1 and Tab. 4.1. It is also possible to refer to multiple targets as once, *e.g.* to Figs. 4.1 and 4.2a. You may also return to Sec. 4.1 or look at Eq. (4.2).

If you do not wish to abbreviate the label, for example at the beginning of the sentence, you can use the

`\Cref{...}`

command. Here is an example:

Figure 4.1 is also quite important.

¹This is what a footnote looks like. It often distracts the reader from the main flow of the argument.

Method	Frobnability
Theirs	Frumpy
Yours	Frobbly
Ours	Makes one's heart Frob

Table 4.1: Results. Ours is better.

202 4.1.4 References 202

203 List and number all bibliographical references in 12-point Times, single-spaced, at 203
204 the end of your thesis. To make a reference in the text, use the 204

205 `\autocite{...}` 205

206 command instead of plain `\cite{}`, for example [6]. Where appropriate, include 206
207 page numbers and the name(s) of editors of referenced books. When you cite multiple papers 207
208 at once, please make sure that you cite them in numerical order like this [1, 2, 4–6]. If you 208
209 use the template as advised, this will be taken care of automatically. 209

210 4.1.5 Illustrations, graphs, and photographs 210

211 All graphics should be centered. In \LaTeX , avoid using the `center` environment for 211
212 this purpose, as this adds potentially unwanted whitespace. Instead use 212

213 `\centering` 213

214 at the beginning of your figure. Please ensure that any point you wish to make is 214
215 resolvable in a printed copy of the paper. Resize fonts in figures to match the font in the body 215
216 text, and choose line widths that render effectively in print. Readers (and reviewers), even of 216
217 an electronic copy, may choose to print your paper in order to read it. You cannot insist that 217
218 they do otherwise, and therefore must not assume that they can zoom in to see tiny details on 218
219 a graphic. 219

220 When placing figures in \LaTeX , it's almost always best to use `\includegraphics`, 220
221 and to specify the figure width as a multiple of the line width as in the example below 221

222 `\usepackage{graphicx} ...` 222
223 `\includegraphics[width=0.8\linewidth]` 223
224 `{myfile.pdf}` 224

(a) An example of a subfigure.

(b) Another subfigure.

Figure 4.2: Example of a short caption, which should be centered.

4.1.6 Color

If you use color in your plots, please keep in mind that a significant subset of reviewers and readers may have a color vision deficiency; red-green blindness is the most frequent kind. Hence avoid relying only on color as the discriminative feature in plots (such as red vs. green lines), but add a second discriminative feature to ease disambiguation.

4.1.7 Miscellaneous

Compare the following:

`$conf_a$` $conf_a$

`conf_a` conf_a

See The T_EXbook, p165.

The space after *e.g.*, meaning “for example”, should not be a sentence-ending space. So *e.g.* is correct, *e.g.* is not. The provided `\eg` macro takes care of this.

When citing a multi-author paper, you may save space by using “et alia”, shortened to “*et al.*” (not “*et. al.*” as “*et*” is a complete word). If you use the `\etal` macro provided, then you need not worry about double periods when used at the end of a sentence as in Alpher *et al.* However, use it only when there are three or more authors. Thus, the following is correct: “Frobnication has been trendy lately. It was introduced by Alpher [1], and subsequently developed by Alpher and Fotheringham-Smythe [2], and Alpher *et al.* [3].”

This is incorrect: “... subsequently developed by Alpher *et al.* [2] ...” because reference [2] has just two authors.

244	4.2 Chapter Summary	244
245	Start Strong: For every chapter (except possibly the Problem Statement), make an	245
246	introduction (2 or 3 paragraphs) on what the chapter is all about.	246
247	Stay Strong: Explain ideas in the simplest and most direct way that many people in	247
248	your field can understand. If a certain topic is a bit specialized or hard to remember, make a	248
249	concise introduction. Point the reader to a reference for further understanding. Each chapter	249
250	should be complete or stand-alone and concise.	250
251	Finish Strong: At the end, make a summary (2 or 3 paragraphs) to re-emphasize the	251
252	points discussed in the chapter.	252

253	5. Results	253
254	• Expound #6 (<i>How will you execute your idea?</i>) and #7 (<i>What is the empirical evidence</i>	254
255	<i>that your idea works?</i>).	255
256	• Make a complete description of your experimental setup (<i>e.g.</i> dataset, train and	256
257	test/validation configurations, hardware configurations, software framework).	257
258	• Describe the metrics (performance measures) that are used to benchmark the task.	258
259	These are the same metrics in the review of lit. Sometimes, you may need to introduce	259
260	new metrics. However, you have to have a strong justification on why there is a need	260
261	for a new metric and it is a good measure of performance in a task.	261
262	• Make sure the metrics are comprehensive (<i>e.g.</i> include model parameter count, FLOPS,	262
263	inference time, memory use, energy consumption, <i>etc.</i>).	263
264	• Use graphs and tables to summarize the quantitative results from your proposed	264
265	method vs SOTA.	265
266	• Illustrate sample outputs to qualitative describe the results of your experiments.	266
267	5.1 Chapter Summary	267
268	Start Strong: For every chapter (except possibly the Problem Statement), make an	268
269	introduction (2 or 3 paragraphs) on what the chapter is all about.	269
270	Stay Strong: Explain ideas in the simplest and most direct way that many people in	270
271	your field can understand. If a certain topic is a bit specialized or hard to remember, make a	271
272	concise introduction. Point the reader to a reference for further understanding. Each chapter	272
273	should be complete or stand-alone and concise.	273
274	Finish Strong: At the end, make a summary (2 or 3 paragraphs) to re-emphasize the	274
275	points discussed in the chapter.	275

276

6. Analysis and Discussion

276

277

- As a follow up of #7 (*What is the empirical evidence that your idea works?*), given the experimental results, make an in-depth analysis and discussion to argue and justify that your proposed method works.

277

278

278

279

279

280

- Use further evidences (*e.g.* attention maps) to emphasize the strong points of your method.

280

281

281

282

- Make an ablation study (*e.g.* what if we vary the depth of the network, what if we introduce data corruption, *etc.*) to further show strong/weak points of your proposed method.

282

283

283

284

284

285

- No method is perfect. What are the failure cases of your method (*e.g.* method does not work on rotated text). Explain why your method fails in these cases.

285

286

286

287

6.1 Chapter Summary

287

288

Start Strong: For every chapter (except possibly the Problem Statement), make an introduction (2 or 3 paragraphs) on what the chapter is all about.

288

289

289

290

Stay Strong: Explain ideas in the simplest and most direct way that many people in your field can understand. If a certain topic is a bit specialized or hard to remember, make a concise introduction. Point the reader to a reference for further understanding. Each chapter should be complete or stand-alone and concise.

290

291

291

292

292

293

293

294

Finish Strong: At the end, make a summary (2 or 3 paragraphs) to re-emphasize the points discussed in the chapter.

294

295

295

296	7. Conclusion	296
297	• Expound #8 (<i>What can you conclude from the study that you have accomplished?</i>)	297
298	and #9 (<i>What are the possible future works that will extend your study?</i>).	298
299	• Please summarize all important points of your thesis (<i>i.e.</i> from the beginning to end).	299
300	• What are the future unsolved issues in your thesis?	300
301	• How other researchers can take off from your outputs?	301
302	7.1 Limitations and Future Work	302
303	What are the limitations of your work? Given these, what are possible future research	303
304	directions?	304
